

## Purpose of Protocol

This protocol is designed to remediate symptoms of localized or systemic alkalosis due to local or systemic failure of oxygen energy production.

## Titration Detail

For Discomfort:

1. Score the Discomfort/Nausea on a Scale of 1-10
2. Take One Capsules if under 60 lbs, Two if 60-120 lbs, Three if 120 lbs+
3. Wait 10 minutes
4. Score Discomfort/Nausea again
5. Stop if:
  - Discomfort/Nausea gets worse
  - Discomfort/Nausea stops getting better
  - You've hit 6/12/15 capsules (Increase if tolerance last time was good)
6. Continue if:
  - Nausea is better
  - There is no change and less than 4+ capsules. [4+ means that you can increase the ceiling each time you use the protocol. I've used 10 with my kids without ill effect.]

If the program does not work, it means that the issue is probably more liver related than stomach.

## Avoidance protocol using Urine pH

Test urine pH. If greater than 5.5 take three capsules. This may help avoid symptoms.

## Causes of Metabolic Acid Depletion

In simple terms, **any form of *biological stress* resulting oxygen energy production failure**. This process eventually depletes the body's pH buffer reserve. It causes an alkali imbalance in various tissues depending on the location and cause.

Any injury to the vascular system can cause localized pain, or lesions:

- Eczema (due to toxic interference with oxygen production)
- Sea Sickness
- Burning Pain (Post injury or post surgery)
- Addiction (Neurological)
- Cancer (vascular failure)
- Poison ivy/oak/Sumac (topical toxin that blocks aerobic metabolism)
- Most pollen/dust Allergies (inhaled toxin that blocks aerobic metabolism)
- Tourniquet injury (Mechanical blockage 90min + that injures vascular system)  
-> Requires LiveO2 for recovery

his protocol is designed to remediate symptoms of localized or systemic alkalosis due to local or systemic failure of oxygen energy production.

## Scientific Explanation

[Dr. Emmanuel Revici](#) documented that most, *if not all*, pathogenic cells absorb [chloride](#) into the [double bonds](#) of [unsaturated fatty acids](#).

Revici correlated chloride stress physiology to:

- Systemic chloride depletion resulting in insufficient stomach acid (among other symptoms);
- Appearance of chlorine oxidized lipids on the surface of the intestine resulting in bowel dysfunction, often diagnosed as [diverticulitis](#) and [Chron's disease](#);
- [Medical Shock](#), resulting in reduced blood flow, and dysfunction in the upper small intestine which
- Saponification of lipids resulting in soap in urine, bubbles, froth, high frequency urination
- Alkalosis in tissues resulting in
  - Itching
  - Skin lesions
  - Rashes
  - As a result of stress.

## Durable Care - Smart Selenium

[Link for Smart Selenium](#)

Normally the oxygen failure results from a toxin or injury. Cells affected by this absorb unnatural amounts of oxidized lipids.

Smart Selenium will normally cure the imbalance by detoxifying the irritation agent that causes the underlying condition.

- Apply topically
- Up to 40 drops internally
